NSF (National Sanitation Foundation) International, established in 1944, is an independent, not-for-profit organization that provides conformance testing services to government agencies, consumers and manufacturers. The products presented here – **just some of those we have certified** – fall into two categories:

NSF / ANSI Standard 51

- Products certified are hybrid and epoxy coatings that may have incidental contact with food products, and are suitable for applications such as food display and processing equipment. Food display equipment includes refrigerated and non-refrigerated - salad bars and buffet tables, and food mixing / preparation housings.
- FDA related certification

NSF / ANSI Standard 61

- Products certified are hybrid and epoxy coatings used as single coat applications for uses including valves, fittings, pipes, and tanks used to distribute potable (drinking) water.

The following links will take you to the NSF pages listing all of our Standard 51 and 61 products.

Standard 51 Incidental Food Contact
