### INSTALLATION

Provide the correct counter cut-out opening (see chart below) and drop unit in. The vinyl gasket assures complete seating. A non-toxic silicone sealer may be used between the gasket and counter top (not required).

MODEL	CUT-OUT REQUIRED
WCPT-3	22 1/4" X 41 3/4"
WCPT-4	22 1/4" X 55 1/2"

The unit should be level for draining purposes. When installing unit in counter, it is recommended that the operator side of the counter be completely open for air circulation. When this is not possible, such as in an island counter, it is recommended that two grill openings are provided approximately 18" x 18" of free air for intake and exhaust at the opposite ends of counter. Also the counter must have an opening of approximately 24" x 14" to access the compressor for maintenance. Then the refrigeration components can be reached by removing six (6) screws from control and rear panels.

The unit is supplied with a power cord and NEMA plug. Refer to data plate on compressor housing for the amperage and voltage information. Use a licensed electrician when installing power source.

For cleaning and maintenance of inside top evaporator coil a qualified refrigeration technician is recommended.

---

---

### OPERATION

The unit is ready to be operated as soon as it is plugged in and switched on. The unit has been pre-tested for proper operation from 35 to 40 degrees.
